Local Transaction Manager API D4.2

September 2014

Document Information

Scheduled delivery	30.09.2014
Actual delivery	24. 10.2014
Version	1.0
Responsible Partner	UPM

Dissemination Level:

PU Public

PP Restricted to other programme participants (including the Commission)

RE Restricted to a group specified by the consortium (including the Commission)

CO Confidential, only for members of the consortium (including the Commission)

Revision History

Date	Editor	Status	Version	Changes
10. 09.2014	Ricardo Jimenez	Draft	0.1	Initial template
15. 09.2014	Iván Brondino	Draft	0.2	
30. 09.2014	Marta Patiño	Draft	0.3	
14. 10.2014	Iván Brondino	Draft	0.4	Peer reviews
24. 10.2014	Ricardo Jimenez	Draft	1.0	Final version

1. Executive Summary

This deliverable describes the Local Transaction Manager's (LTM) application programming interface (API). The Local Transaction Manager is the integration point for different data stores with the Coherent PaaS Holistic Transaction Manager.

Applications bracket transactions through the Local Transaction Manager and register different data stores that participate in the transactions. The Local Transaction Manager is in charge to coordinate the life cycle of transactions and interacts with the involved data stores to provide full transactional ACID semantics to the application.

The Local transaction manager is deployed jointly with the data store clients, Common Query Engine Client and the application.
